

ACCESS TO PUBLIC WATER SUPPLY AND DRINKING WATER QUALITY IN SLOVENIA – TRENDS 2004-2010

Ivanka Gale, Aleš Petrovič: National Institute of Public Health

Safe drinking water is vital important for the health of the population.

The poster shows the minimum requirements for access to an adequate supply of piped and safe water in the home. Information is of paramount importance for risks evaluation related to water and hygiene.

The data reflect the proportion of the population supplied by a public system regularly checked for compliance with quality criteria and so the safety of drinking-water.

Figure 1: Proportion of the population with permanent access to the drinking-water at home

Figure 2: Proportion of non-compliance samples (*Escherichia coli*) in the period 2004-2010

Figure 3: Proportion of non-compliance samples of the chemical parameters: pesticides and nitrate, 2004-2010

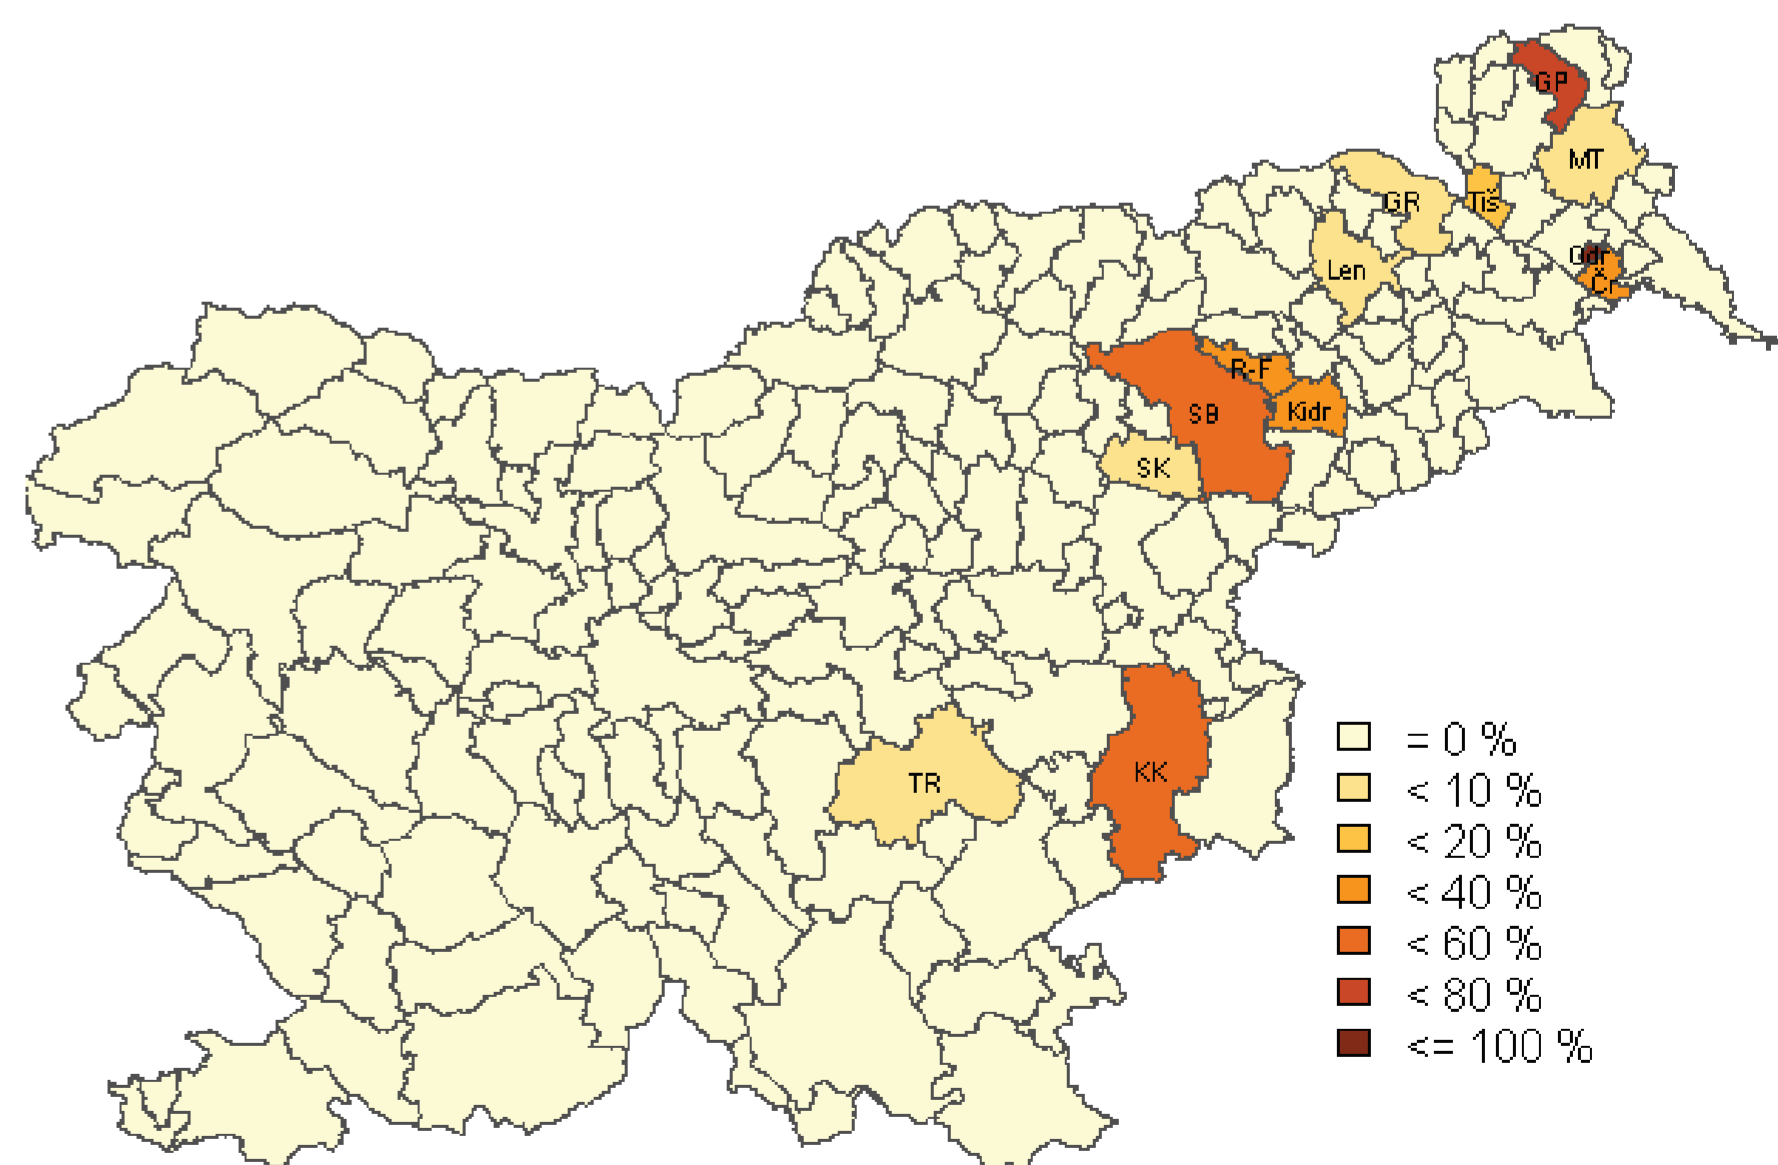

Figure 3: Non-compliance samples of the chemical parameters: pesticides and nitrate, 2006
